Distillation Engineering H Distillation is perhaps the most widely used separation process in processing engineering and operates on the principle of the difference in volatilities of substances to be separated. In a hypothetical study comparing distillation versus adsorption, Ruthven (1984) showed that for separating an A-B mixture, the use of distillation becomes impractical if the relative volatility of A to B is less than 1.2. Engineering, 2017. Introduction. Distillation is the most commonly used method for the separation of homogeneous liquid mixtures and is based on differences in the boiling points or relative volatility of the constituent components. 1,2 However, where the relative volatility is close to unity (e.g., for the separation of azeotropic mixtures or close boiling components), a third component (i.e., entrainer, solvent, or ...
